Weight

Declaw 2 feet \$199.95

Declaw 4 feet \$329.95

Declaw 2 feet w/ Laser \$299.95

Declaw 4 feet w/ Laser \$499.95

Our declaw surgery includes:

1. A pre-anesthetic assessment will be performed as part of the dental procedure. A full wellness exam is required for all patients within 90 days of the procedure.
2. Gas anesthesia using isoflurane.
3. Pulse oximeter monitoring of oxygen level and heart rate.
4. An injection of pain medication (Buprenorphine) that will last a total of 72 hours.
5. The surgery itself.
6. Pain medication/anti-inflammatory (Metacam) while in the hospital and to go home.
7. Antibiotic injection of Convneia.

A complete physical exam will be performed on your pet prior to the surgical procedure if it has been longer than 90 days since the last exam. However, this may not identify all systemic or metabolic problems. For this reason, we highly recommend doing a pre-anesthetic blood panel for pets of any age.

* These options below may not be required for your pet depending on their age, however we do recommend them for the safety and comfort of your pet. By checking the box next to the option you want you are asking that we perform that service. Please let us know if you have any questions.

☐ **MICROCHIP \$39.50**

Although this can be installed at any time, it involves a fairly large needle so if done while your pet is under anesthesia and already getting pain medication, the procedure is more comfortable. Our microchip includes lifelong registration.

☐ **ELIZABETHAN COLLAR \$7.75-\$12.75**

This is the collar that goes around your pets neck to help prevent them from licking or chewing at the incision sites. Not all pets need this but it is handy to have just in case.

☐ **SOFT COLLAR \$11.06-\$14.75**

☐ **IV FLUIDS \$89.75**

The IV catheter provides quick access to the veins case of an emergency. The fluid helps regulate blood pressure, protects the kidneys and liver, and prevents dehydration. They also help your pet during the recovery period from anesthesia during the period after the anesthesia. This is strongly recommended for all pets and **is required for pets age 7 years and older.**

☐ **PRE ANESTHETIC BLOOD TESTING \$180.00 - \$200.00**

We run a very thorough test of approximately 35 different things, including a CBC for anemia and white blood cell problems, testing for liver, kidney, electrolyte problems, diabetes, thyroid levels and many other things. This is an option if your pet is under 7 years old and **is required for pets 7 years and older**.

☐ **SEDATIVES TO GO HOME \$15.75**

In order to keep your pet calmer during the 2 week recuperation period we can send home sedatives.

I understand that some risks always exist with anesthesia and/ or surgery and that I am encouraged to discuss any concerns I have about those risks with the attending veterinarian before the procedure(s) is/are initiated.

I understand that the attending veterinarian will make every effort to contact me regarding treatment in the case of unforeseen emergencies. If unable to contact me, the staff may or may not have my permission to proceed with life sustaining procedures.

I give my permission [yes]: ☐ **I do not give my permission [no]:** ☐

While I accept that all procedures will be performed to the best of the abilities of the staff at this hospital, I understand that no guarantee or warranty has been made regarding the results that may be achieved.

I also assume full responsibility for any additional expenses incurred after the surgical procedure is performed, such as follow up radiographs, re-check physical exams and additional surgery due to post-op complications. These are more likely to occur when there is a failure to comply with the aftercare instructions.

I have read and fully understand the terms and conditions set forth above.
